

重排反应练习题

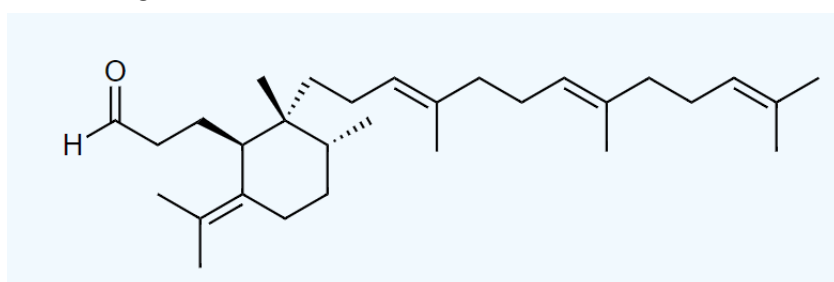

1. Predict the product of the following reaction.

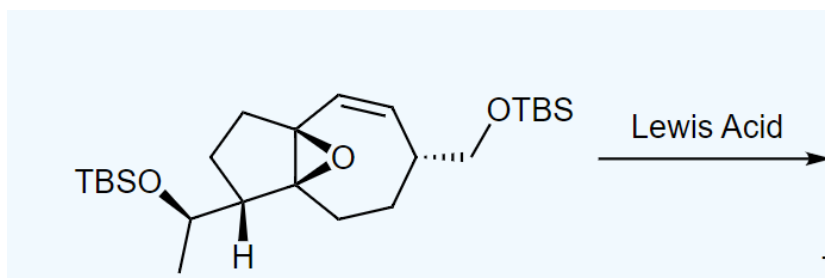

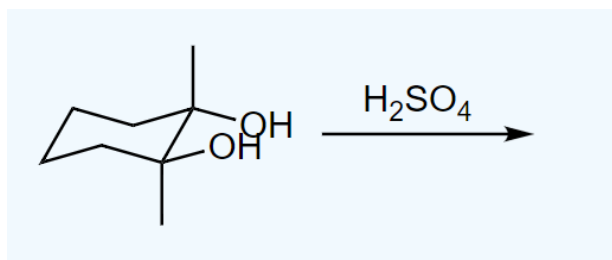

2. Only one of the following two reactions yields a Grob fragmentation. Which reaction is it? Explain.

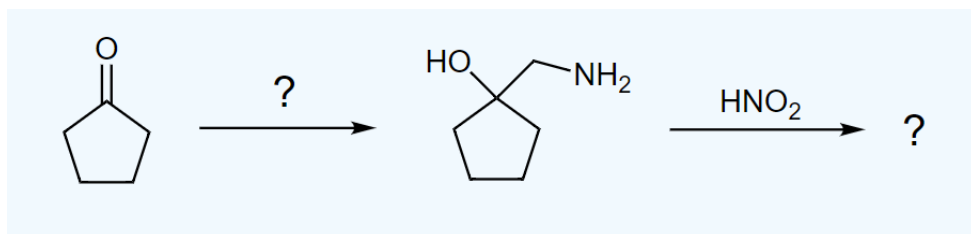

3. The triterpene shown below was shown to arise biosynthetically via a Grob fragmentation. Propose a reasonable precursor that would participate in this fragmentation to yield the given target.

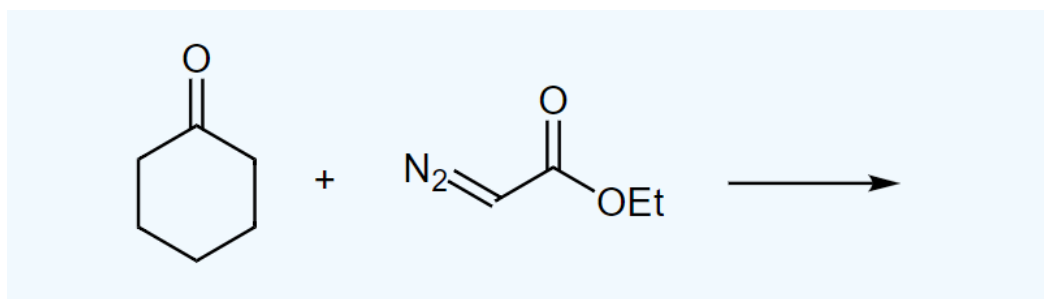

4. What is the product of this reaction? Also, provide a mechanism for its formation.

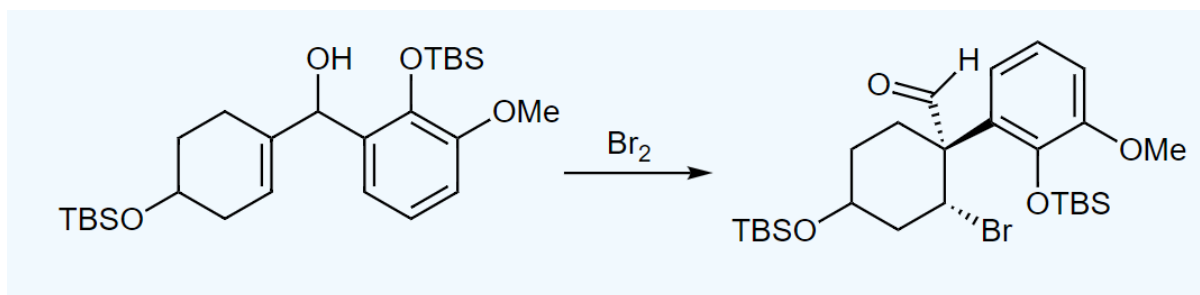

5. First, starting with cyclopentanone, how would you produce the desired aminoalcohol?
Second, what product is formed upon exposure of the aminoalcohol to nitrous acid?

6. Propose a mechanism and the product for the following reaction.

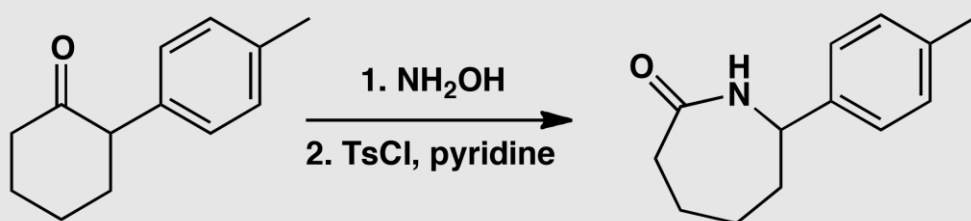

7. Propose a mechanism for the following transformation.

8.

Explain this series of reactions.

9.

Give the products of Baeyer-Villiger rearrangements on these compounds, with reasons.
