

1. Predict the major products of photochemical monobromination with NBS on following compounds.

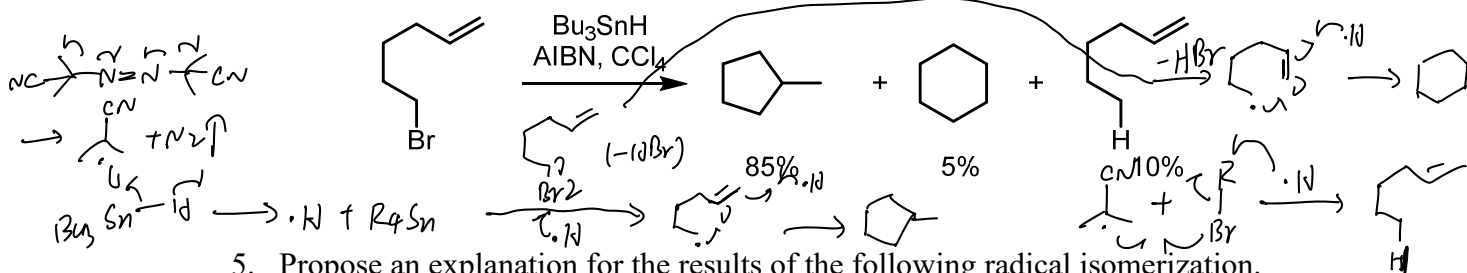

2. Give the major product of this reaction and propose a mechanism.

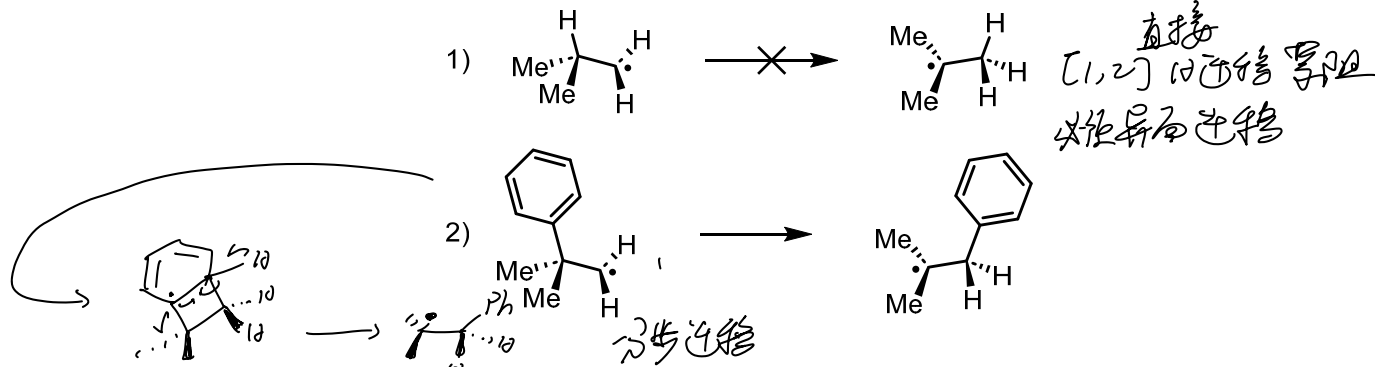

3. Suggest a mechanism for the following transformation.

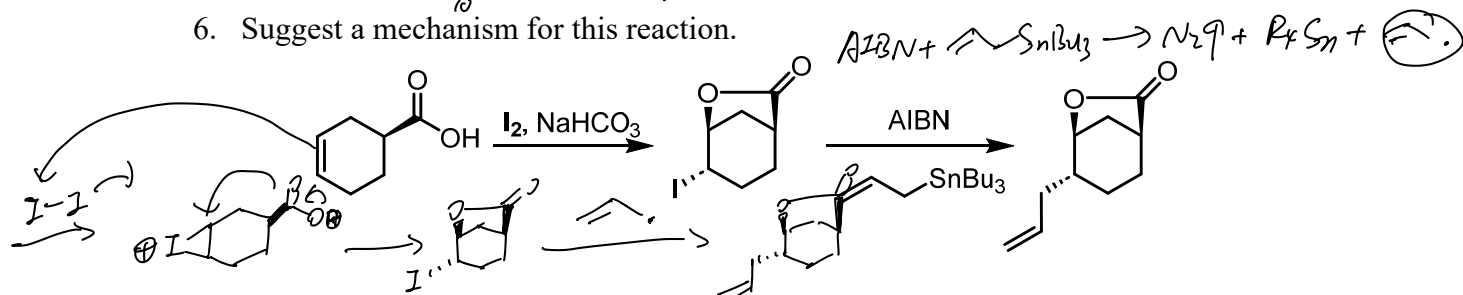

4. Propose a mechanism for the formation of three products in the following reaction.

5. Propose an explanation for the results of the following radical isomerization.

6. Suggest a mechanism for this reaction.

7. Suggest a mechanism for this reaction.
